WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Folded hood 254 wide, 147 deep, 307 tall outside, open at the bottom and the back; 2 mm sheet, bent on a press brake.

Front 254 x 307; two sides 147 deep; top 254 x 147, joined to the sides by folded tabs with two 4 mm rivets each.

Back edge of each side: a 15 mm flange folded 90 degrees inward.

Flange holes 5.5 mm, 7.5 in from the side sheet, 40 and 260 up from the lower edge.

Powder coat white after folding; deburr every edge first.

Fit: flanges flat on the back plate, 10 clear of the box; four M5 thumb screws. 25 mm air gap at the front, sides and top.

Front panel: a 12.2 mm slot open at the bottom edge, its round end 10 mm up from the lower edge, for the status light unit.

To open the lid: pull the status light unit down out of its slot, undo the four thumb screws, slide the shield forward.

Check: on a trial fit the gap is 25 mm (plus or minus 3) all round.
