WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make three the same, 20 x 20 x 16 mm, in black ASA.
A 5 mm bore on the axis from the wall face, 12 deep, for the LED (left wall) or a light-to-frequency detector (front and right).
A 3 mm hole from the bore out of the top for the leads.
Two 3.4 mm holes at opposite corners, 3.5 in from the edges, for M3 screws into tapped holes beside each window.
Seat the LED or detector against the window disc, pot it in black epoxy so no daylight leaks in, and lead the wires out of the top.
Fit: face flat on the cell wall, centred on its window.
Check: in the dark, the detector reads the same with the room light on and off.

WATERWATCH

github.com/BoujeeEnjinia1701/waterwatch

WaterWatch optics holder (make 3): making sketch

DRAWING NO.	REV	SHEET	SIZE
WWT-DWG-107	P1	1 of 1	ANSI B
